DETAILED ACTION

Title

The title of the invention is not descriptive. A new title is required that is clearly indicative of the **invention** to which the claims are directed.

Drawings

The drawings were received on 4 June 2004. These drawings are accepted by the examiner.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-8 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by de Groot(6,359,692).

The patent to de Groot teaches an optical profiling system comprising a tunable light source(22), beam-splitter(26), collimating lens(28), reference plate(30), measurement object(40), support(50), CCD detector(32), frame grabber(33), control computer(60) and driver(24), see figure 1. The driver adjusts the wavelength of the source by an amount $\Delta\lambda$ around a wavelength λ_0 continuously or in steps, see

column 5, lines 22+. The CCD detector accumulates charge over an integration time thus also acting as an integrator. The successive image frames captured by the CCD detector are combined to form a phase profile of the object surface, thus the weighted average is 1:1.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any

Art Unit: 2877

inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 11 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over de Groot(6,359,692).

Not specifically taught by de Groot are any machining steps.

It would have been obvious to one of ordinary skill in the art at the time the invention was made apply the measurement system of de Groot to profiling a surface of an object during manufacture since the system of de Groot can be applied to any measurement object.

Allowable Subject Matter

Claims 9 and 10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. Claims 9 and 10 define specific weighted averages not found in the prior art of record.
